2012 Appraisal Index

To assist clinicians looking for authoritative assistance with clinical problems, the journal publishes an annual index of content from the most recent two years of Appraisal pages. This index includes content from Volumes 57 and 58 of Journal of Physiotherapy. Content is indexed under the PEDro codes: subdiscipline, intervention, problem, and body part, and identified by Appraisal section and Volume and page number. Some content is indexed under more than one code.

**Subdiscipline**

**Cardiothoracics**

**CAPs**
- Questioning the role of targeted respiratory physiotherapy over and above a standard clinical pathway in the postoperative management of patients following open thoracotomy
  - Vol 57 No 4, p 256
- Action plans and case manager support may hasten recovery of symptoms following an acute exacerbation in patients with chronic obstructive pulmonary disease (COPD)
  - Vol 58 No 1, p 60
- Combined resistance and aerobic training is more effective than aerobic training alone in people with coronary artery disease
  - Vol 58 No 2, p 129
- Interval training confers greater gains than continuous training in people with heart failure
  - Vol 58 No 3, p 199
- Neuromuscular electrical stimulation appears to be useful in people with severe chronic obstructive pulmonary disease
  - Vol 58 No 4, p 270
- Aerobic treadmill training effectively enhances cardiovascular fitness and gait function for older persons with chronic stroke
  - Vol 58 No 4, p 271

**Continence & Women’s Health**

**CAPs**
- Manual lymph drainage when added to advice and exercise may not be effective in preventing lymphoedema after surgery for breast cancer
  - Vol 57 No 4, p 258
- A 12-week exercise program performed during the second trimester does not prevent gestational diabetes in healthy pregnant women
  - Vol 58 No 3, p 198

**Clinimetrics**
- 2D real time ultrasound for pelvic floor muscle assessment
  - Vol 57 No 1, p 59
- Active Straight Leg Raise
  - Vol 58 No 2, p 132

**Gerontology**

**CAPs**
- Group task-specific circuit training for patients discharged home after stroke may be as effective as individualised physiotherapy in improving mobility
  - Vol 58 No 4, p 269

**Clinical Practice Guidelines**
- Prevention of falls in older persons
  - Vol 57 No 2, p 130
- Palliation in aged care
  - Vol 58 No 1, p 63
- Daily use of a cane for two months reduced pain and improved function in patients with knee osteoarthritis
  - Vol 58 No 2, p 128
- Osteoarthritis
  - Vol 58 No 2, p 133
- Hip fracture
  - Vol 58 No 4, p 275
- Osteoporosis
  - Vol 58 No 4, p 275

**Musculoskeletal**

**CAPs**
- Telephone-based patient self-management program might be effective in reducing osteoarthritis-related pain
  - Vol 57 No 2, p 125
- Lateral wedge insoles worn for 12 months provided no symptomatic or structural benefit for people with medial knee osteoarthritis
  - Vol 57 No 3, p 195
- Surgery with disc prosthesis may produce better outcomes than multidisciplinary rehabilitation for patients with chronic low back pain
  - Vol 58 No 4, p 257
- Targeted physiotherapy treatment for low back pain based on clinical risk can improve clinical and economic outcomes when compared with current best practice
  - Vol 58 No 1, p 57
- A specific exercise program for patients with subacromial impingement syndrome can improve function and reduce the need for surgery
  - Vol 58 No 2, p 127
- Daily use of a cane for two months reduced pain and improved function in patients with knee osteoarthritis
  - Vol 58 No 2, p 128
- Abdominal muscle feedforward activation in patients with chronic low back pain is largely unaffected by 8 weeks of core stability training
  - Vol 58 No 3, p 200
- Multi-modal realignment treatment decreases pain in people with medial tibiofemoral osteoarthritis
  - Vol 58 No 4, p 272

**Clinimetrics**
- The Neer sign and Hawkins-Kennedy test for shoulder impingement
  - Vol 57 No 4, p 260
- Western Ontario Rotator Cuff Index
  - Vol 58 No 3, p 201
- The Patient-Rated Elbow Evaluation (PREE)
  - Vol 58 No 4, p 274

**Clinical Practice Guidelines**
- Achilles pain, stiffness, and muscle power deficits
  - Vol 57 No 1, p 62
- Knee pain
  - Vol 57 No 2, p 130
- Arthroscopic shoulder surgery
  - Vol 57 No 4, p 261
- Tension-type headache
  - Vol 57 No 4, p 261
- Osteoarthritis
  - Vol 58 No 2, p 133
- Hand, hip, and knee osteoarthritis
  - Vol 58 No 3, p 203
- Cervical radiculopathy
  - Vol 58 No 3, p 203
- Hip fracture
  - Vol 58 No 4, p 275
- Osteoporosis
  - Vol 58 No 4, p 275
**Neurology**

**CAPs**  
Bimanual therapy and constraint-induced movement therapy are equally effective in improving hand function in children with congenital hemiplegia  
Group task-specific circuit training for patients discharged home after stroke may be as effective as individualised physiotherapy in improving mobility  

**Climimetrics**  
International standards for the neurological classification of spinal cord injury  
The Dix-Hallpike Test  

**Clinical Practice Guidelines**  
Early Parkinson's disease  
Tension-type headache  
Cervical radiculopathy  

**Orthopaedics**

**CAPs**  
A specific exercise program for patients with subacromial impingement syndrome can improve function and reduce the need for surgery  
Daily use of a cane for two months reduced pain and improved function in patients with knee osteoarthritis  
Multi-modal realignment treatment decreases pain in people with medial tibiofemoral osteoarthritis  
The Patient-Rated Elbow Evaluation (PREE)  

**Clinical Practice Guidelines**  
Osteoarthritis  
Hand, hip, and knee osteoarthritis  
Hip fracture  
Osteoporosis  

**Paediatrics**

**CAPs**  
Aerobic exercise enhances executive function and academic achievement in sedentary, overweight children aged 7–11 years  
Bimanual therapy and constraint-induced movement therapy are equally effective in improving hand function in children with congenital hemiplegia  
Functional progressive resistance training improves muscle strength but not walking ability in children with cerebral palsy  

**Climimetrics**  
The six-minute walk test in paediatric populations  

**Clinical Practice Guidelines**  
Developmental co-ordination disorder  

**Sports**

**CAPs**  
Eccentric hamstring muscle training can prevent hamstring injuries in soccer players  

**Other**

**Climimetrics**  
Pain Intensity Ratings  
The Dix-Hallpike Test  
Brief Illness Perception Questionnaire (Brief IPQ)  
SPHERE 12 Screening Questionnaire  

**Acupuncture**

**CAPs**  
Traditional Chinese Acupuncture was not superior to sham acupuncture for knee osteoarthritis but delivering treatment with high expectations of improvement was superior to delivering treatment with neutral expectations  

**Behaviour Modification**

**CAPs**  
Telephone-based patient self-management program might be effective in reducing osteoarthritis-related pain  

**Fitness Training**

**CAPs**  
Supervised aerobic and resistance exercise improves glycaemic control and modifiable cardiovascular risk factors in people with Type 2 diabetes mellitus  
Aerobic exercise enhances executive function and academic achievement in sedentary, overweight children aged 7–11 years  
Combined resistance and aerobic training is more effective than aerobic training alone in people with coronary artery disease  
Functional progressive resistance training improves muscle strength but not walking ability in children with cerebral palsy  
A 12-week exercise program performed during the second trimester does not prevent gestational diabetes in healthy pregnant women  
Interval training confers greater gains than continuous training in people with heart failure  
Abdominal muscle feedforward activation in patients with chronic low back pain is largely unaffected by 8 weeks of core stability training  

---

**Appraisal Annual Index**

**278**  
*Journal of Physiotherapy* 2012 Vol. 58 – © Australian Physiotherapy Association 2012
Group task-specific circuit training for patients discharged home after stroke may be as effective as individualised physiotherapy in improving mobility. 
Aerobic treadmill training effectively enhances cardiovascular fitness and gait function for older persons with chronic stroke. 
Multi-modal realignment treatment decreases pain in people with medial tibiofemoral osteoarthritis.
